

Account Updater

Ongoing Updates for Continuous Cash Flow

With the Account Updater service, VISA and MasterCard numbers are sent by Constellation Payments to the Account Updater database. Any new information, such as a new expiration date, is then sent back to the gateway and the merchant's software to be used during the next billing cycle.

Uninterrupted Cash Flow

Regular credit card number and expiration updates increase continuous revenue capture, while reducing payroll costs that would be used to recover payment.

Increased Convenience

No need for your customers to contact you, or you to contact them. Account Updater does the work for you — updating credit card numbers and expiration dates on file.

Account Updater is available for Elavon and Vantiv accounts.
